DC Drives Ltd are Peter Jones & Phil Williams Electronic Design House.

Quantum leap in Infra-Red Remote Controls

DC Drives is the most respected name in Stairlift Electronics, having designed from scratch, Stannahs first series of Battery Stairlifts, and the Bison Bede 'Contour' Automatic Levelling Stairlift as well as the excellent Induction Loop Remote Control.

We have now re-invented Infra-Red remote controls and overcome the range limitations of line-of-sight, so that a standard hand-held sender works over $\frac{3}{4}$ of a mile in open space!! (Electronics Weekly feature)

This means that an infra red remote control will work comfortably over several stories in a building and is entirely reliable over curved rail installations with no irritating drop-outs, and without going to the trouble of multiple receive points or reflectors or repeaters.

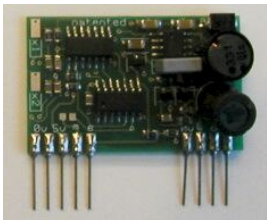

It is also universally acceptable so there are no Radio Frequency issues between countries.

We can also provide Hinge rail interlocks and Hinge-rail UP/DOWN Commands.

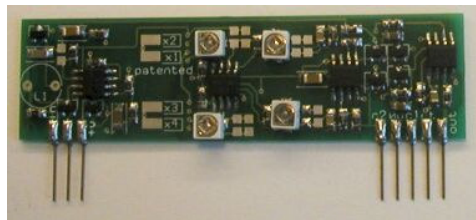

The result is simplification. One system for all lifts, straight, Curved and Complex, fit and forget.

DC Drives has made Infra-Red *far better than Radio* for controlling Stairlifts. And this is one industry we know very well indeed!
